SCUDOFERRUM • GEOscudo

Smalto anticorrosivo ferromicaceo

corrosion-resistant micaceous iron oxide topcoat

PER LA VERNICIATURA DI MANUFATTI IN FERRO

Le tinte Scudoferrum e Geoscudo, qui proposte, sono tutte realizzabili con il Sistema Tintometrico Smaltosistem® per i tipi a solvente, con il Sistema Tintometrico Geocolor® per i tipi all'acqua.

Gli Smalti ferromicacei Alcea sono pitture metalliche ad effetto antichizzante, conferiscono una finitura tipica del "ferro battuto" assicurando nel contempo una elevata protezione al supporto in ferro.

Gli Smalti ferromicacei Scudoferrum a solvente e Geoscudo ad acqua proteggono: cancellate, grate, caloriferi, ringhiere, infissi metallici, lampioni; sono anche un rivestimento ideale per strutture in ferro inserite in un contesto architettonico d'epoca. Scudoferrum, nella versione grana grossa e Geoscudo, sono dotati di elevata adesione anche se applicati su supporti zincati. Le pastiglie colorate inserite in questa cartella sono realizzate con Smalto Scudoferrum grana fine.

Le 24 tinte sono realizzabili anche nella versione: Scudoferrum grana grossa e Geoscudo, applicate, appariranno leggermente diverse per la differenziata granulometria dell'alluminio e dell'ossido di ferro micaceo che entra come componente nei quattro prodotti.

* Tinte disponibili in latte preconfezionate.

I colori di questa cartella sono indicativi e possono subire col tempo leggere alterazioni dovute alla luce e all'invecchiamento.

STEEL ITEMS ONLY

Scudoferrum and Geoscudo topcoats shown here can be formulated using the Smaltosistem® Colour Mixing System for solventborne coatings.

Alcea micaceous iron oxide topcoats are antique finish, metallic paints, which give the substrate a "wrought iron" appearance whilst providing the iron substrate with a high degree of protection.

Scudoferrum solventborne topcoats and Geoscudo waterborne topcoats are suitable for protecting gates, grilles, railings, metal window and door frames and lampposts and are also ideal for ironwork in period architecture.

Scudoferrum (coarse grain version) and Geoscudo have a high level of adhesion even if applied to galvanised substrates.

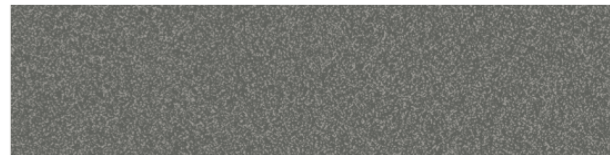

The colour chips contained in this colour card were all achieved with Scudoferrum fine grain topcoat.

The 24 colours are available in Scudoferrum coarse grain and Geoscudo. Once applied, the appearance will vary slightly on account of the different particle size of the aluminium and micaceous iron oxide used in all four product formulas.

* ready-mixed colours.

The colours shown in this colour card are indicative and are subject to slight variations over time as a result of ageing and exposure to light.

GRANA FINE / FINE GRAIN

* 6539/0401 argento

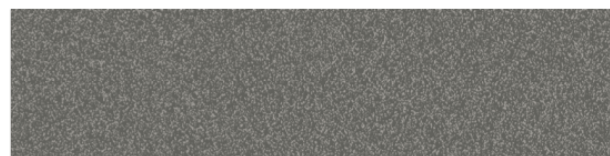

* 6539/0000 grigio ferro

4636/H + 0100/90 argento (Vedi tintnext 4636/0401)

* 6546/0000 grigio ferro

2939/0401 argento

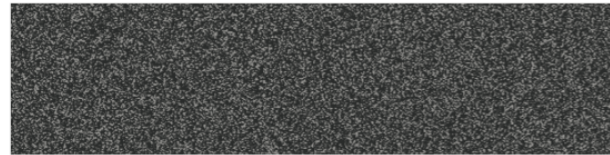

2649/0000 Scudogel grigio ferro

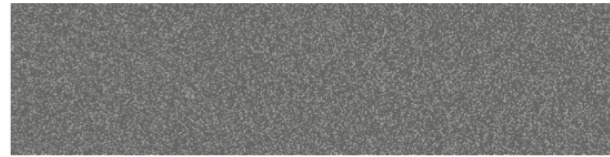

GRANA GROSSA / COARSE GRAIN

* 6549/0401 argento

* 6549/0000 grigio ferro

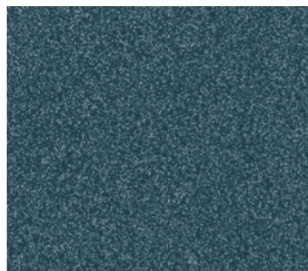

4636/H + 0100/91 argento (Vedi tintnext 4639/0401)

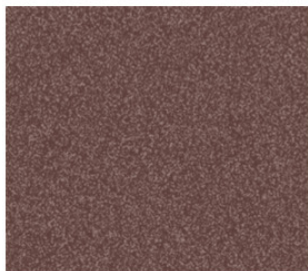

* 2939/0000 grigio ferro

0458 azzurro petrolio

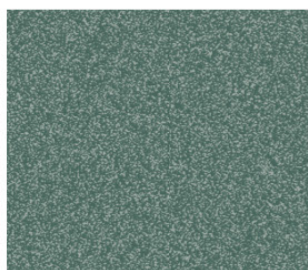

0462 oro

0460 camoscio

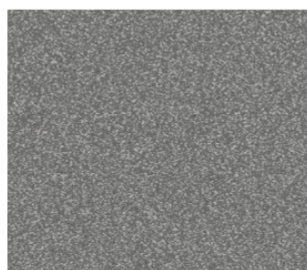

0439 oro antico

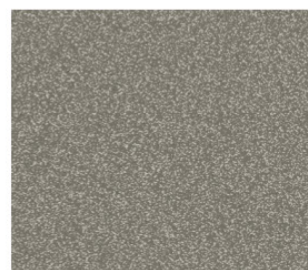

0454 verde medio

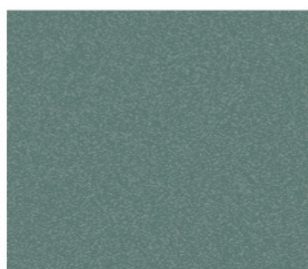

0444 brunito

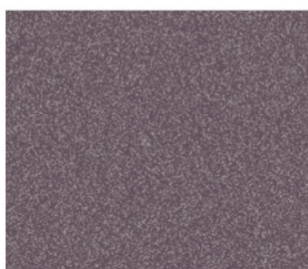

0447 argento chiaro

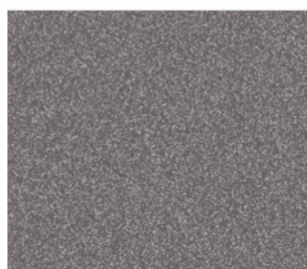

0448 argento bronzato

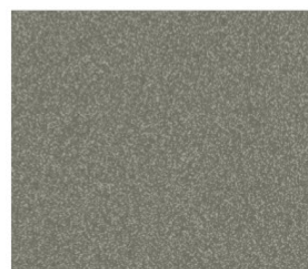

0455 verde salvia

0441 viola

0449 argento violaceo

0459 beige

IL SISTEMA PER COLORARE IL MONDO

Smaltosistem e Geocolor sono sistemi tintometrici per colorare il mondo e mantenerlo pulito.

Dall'esperienza Alcea nuove tinte facili da usare ottenute grazie all'efficiente Sistema composto da paste coloranti miscelate con smalti ferromicacei alluminio, operante presso i Rivenditori di zona.

Scudoferrum: Smalto a solvente anticorrosivo ferromicaceo.

Geoscudo: Smalto ad acqua anticorrosivo ferromicaceo.

Sono smalti per la protezione e finitura di manufatti in ferro.

THE WAY TO PAINT THE WORLD

"Paint the world and keep it clean" with Smaltosistem and Geocolor mixing systems.

From Alcea research the new colours are simple to be achieved with the efficient colour mixing system based on pigmented pastes blended with micaceous iron oxide aluminium top coat available from local dealers.

Scudoferrum: Solventborne, corrosion-resistant micaceous iron oxide topcoat.

Geoscudo: Waterborne, corrosion-resistant micaceous iron oxide topcoat.

Topcoats for the protection and finish of iron substrates.
